FR 2742291 is cited for showing a device that examines nearby mobile radio cells to determine the best available cell for communication. A first memory contains a table which includes the present best available cells. A second memory has a list of cells which are to be examined to determine whether signals received from the cell exceed a set level. A third memory includes a table with a table cells which are to be ignored. A control unit writes cell information to the various tables and removes cell information which is no longer applicable.

Applicant hereby expressly reserves the right to swear behind the effective date of the references and to question the relevance and materiality of the references cited, in whole, in part, or in combination, subsequent to filing this Information Disclosure Statement.

Respectfully submitted,
